

MURTAZA AZIZ

Full Stack Software Engineer — Node.js · React · TypeScript · System Design

Sydney, NSW | +61 493 416 213 | [LinkedIn](#) | [GitHub](#) | murtaza.aziz101@gmail.com | [Portfolio](#)

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, SQL, HTML, CSS
- **Backend:** Node.js, Express, Adonis.js, REST API design, async/queue-based processing, authentication, Stripe
- **Frontend:** React, Redux, Tailwind CSS, Vite, Axios
- **Databases:** MongoDB, PostgreSQL, schema design, query optimisation, indexing, caching
- **Cloud & Infra:** AWS (S3, Lambda), Google Cloud, Cloudflare Pages, Render, CI/CD with GitHub Actions
- **Testing & Quality:** Jest, unit/integration testing, SonarLint, PMD analysis, code review, Playwright
- **AI-Assisted Dev:** GPT/Claude/Cursor for development acceleration, internal automation scripts, data processing, debugging
- **Collaboration:** Git/GitHub, Jira, Figma, Slack, Notion, Trello

WORK EXPERIENCE

Prelocal — Software Engineer (Mid-Level)

Nov 2025 – Present

TypeScript, JavaScript, Node.js, REST APIs, Google Cloud, Bubble.io, Make.com

- Own delivery and logistics features end-to-end, translating ambiguous requirements from founders and operations into technical designs, scoped milestones, and shipped solutions.
- Redesigned the delivery route-optimisation algorithm using a nearest-neighbour heuristic with batched constraints, cutting route computation time by ~60% and improving delivery throughput by 40%.
- Drove the move from tightly-coupled workflows toward a modular, service-oriented structure with queue-based async jobs, removing blocking operations and improving system responsiveness under load.
- Optimised core data queries through restructured schemas and targeted indexing, reducing key read latency and supporting order-volume growth without added infrastructure cost.

Prelocal — Junior Software Engineer

Nov 2024 – Nov 2025

JavaScript, Bubble.io, Make.com, APITemplate, Google Cloud

- Implemented logistics and workflow-automation features against clear specs, contributing to the platform's day-to-day delivery operations.
- Architected flexible data structures to introduce a "brands" concept, letting companies manage multiple brands under one account without breaking existing records.
- Built automation pipelines (Make.com + APITemplate) that replaced manual document and data steps, reducing turnaround time on routine operational tasks.

Meyd.it — Full Stack Software Engineer (Internship)

May 2024 – Oct 2024

TypeScript, JavaScript, React, Node.js, Adonis.js, PostgreSQL, Stripe, AWS (EC2, S3, Lambda)

- Designed and integrated escrow-based payment infrastructure with Stripe, handling payments, payouts, and compliance to securely hold funds between transacting parties.
- Built critical backend services deployed on AWS (EC2, S3, Lambda) and reworked the checkout flow for correctness and performance, reducing payment edge-case errors and improving checkout reliability.
- Modelled relational data in PostgreSQL and tuned queries on transaction-heavy paths, keeping response times stable as data grew.
- Reviewed pull requests and enforced quality standards in an agile team, improving consistency and reducing regressions across the codebase.

EZiD — Full Stack Software Engineer (Internship)

Oct 2022 – Feb 2023

MERN (MongoDB, Express, React, Node.js), Stripe, JavaScript, HTML, CSS

- Built a custom subscription payment model with the Stripe API for EZiD's developer portal, ensuring secure, recurring transactions.
- Developed the developer-portal frontend in React with a focus on usability, working closely with senior engineers to align on UX and API contracts.
- Tackled early challenges integrating third-party billing with the existing backend, handling webhooks, edge cases, and failure states reliably.
- Collaborated cross-functionally to keep delivery aligned with project objectives within a fixed internship timeline.

Brainybucks — Project Lead & Software Engineer (Internship/Capstone project)

Feb 2023 – Jul 2023

MERN (MongoDB, Express, React, Node.js), Axios, JavaScript, HTML, CSS

- Led a 4-person team to deliver a responsive website to launch, owning scope, task breakdown, and delivery against stakeholder goals.
- Architected the frontend and API layer and made key technical decisions to keep the build maintainable for a junior team.
- Achieved a 95 SEO score through semantic markup, performance, and metadata work, expanding online visibility and reach.

PROJECTS

DocForge AI — PDF Automation SaaS (solo, production)

TypeScript, React, Vite, Node.js, Express, PostgreSQL, Stripe, Cloudflare Pages, Render, PostHog

- Built and shipped a real SaaS product: a visual PDF template builder with JSON data binding and an API for programmatic, on-demand PDF generation.
- **Architecture:** chose a decoupled frontend (Cloudflare Pages) + Node/Express API (Render) + PostgreSQL for independent scaling, low hosting cost, and clean separation between editor UI and generation engine.
- **PDF engine:** solved reliable template-to-PDF rendering by handling dynamic layouts and font/asset edge cases, isolating heavy jobs so generation never blocks API responses.
- **AI & security:** added AI-driven template audits that flag layout/data-binding issues before generation (fewer failed renders), with API-key auth, scoped access, and input validation to safely expose generation as a public API.

* **Trade-offs & analytics:** shipped on managed PaaS to validate demand fast with a clear path to containerised infra; integrated PostHog to track funnel drop-off and feature usage to prioritise the roadmap.

EDUCATION

Macquarie University — B.Sc. Information Technology

Major: Web and Mobile App Development

Graduated Jul 2023
